MEDICAL
GRADE
CANNABIS

SINCE 2008

better provides its customers with the purest and most natural medical grade cannabis experience. We are proud of our advanced organic cultivation methods that take the environment and the patients' health into account and of the fact that we are pioneers in converting cannabis into a medical product in Israel and globally.

The experience and know-how that we have accumulated over 10 years of activity, have resulted in expressing our philosophy, which is to improve our patients' health and quality of life because of the ability that nature provides us that is embedded in the cannabis plant.

We believe that each cannabis strain has its unique qualities and, therefore, all our products are based on strains that we have refined over the years by purifying the local cultivation.

better is recognized as a global revolutionary in cannabis cultivation while Ensuring the management of nutrition Protocols and chemical- free treatment throughout the entire growing process.

During the curing process there is a high standard and controlled improvement of inflorescence quality, the plant scents and flavours are being refined, Chlorophyll are being released, and Cannabinoids are being developed in inflorescence. This process is important to the "Entourage Effect" and to the whole treatment experience.

In 2019 better received an approval for clinical trial in Australia on our company's leading treatment - the cure E.P treatment, intended for epilepsy children and adolescents who do not respond to pharmacological treatment.

Our oils are extracted directly from the plant without any synthesis process, obtaining a full extract that embodies all the entire herbal richness as it found naturally in the strain. This technique preserves the "Entourage Effect" as it exists in the plant.

better is proud to be a pioneer in the Israeli cannabis industry. The company's products are based on genetics, cultivated, and grown by Israeli team.
